

Project Design Phase

Proposed Solution Template

Date	15 July 2026
Team ID	SWTID-2026-7507
Project Name	DarshanEase - Temple Darshan Ticket Booking App
Maximum Marks	2 Marks

Proposed Solution: DarshanEase

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Devotees face long physical queues, unpredictable slot availability, and no unified real-time booking system across temples, leading to wasted time, missed darshan opportunities, and added stress for elderly and outstation visitors.
2.	Idea / Solution description	DarshanEase is a mobile and web app that lets devotees search, book, and manage darshan and seva slots across multiple temples in real time, with QR-based e-tickets, special quotas for elderly/differently-abled visitors, multilingual support, and live queue status.
3.	Novelty / Uniqueness	Unlike single-temple booking portals, DarshanEase aggregates real-time slot data across multiple temples in one app, issues ID-verified non-transferable e-tickets to curb touting, and shows live queue/wait-time visibility not offered by existing solutions.
4.	Social Impact / Customer Satisfaction	Reduces physical strain and waiting time for elderly and differently-abled devotees, improves accessibility for outstation and non-tech-savvy pilgrims through multilingual and assisted booking, and curbs unofficial ticket touting.
5.	Business Model (Revenue Model)	Nominal convenience fee per booking, an optional premium subscription for priority booking and alerts, commission from partner travel/accommodation bookings, and a processing fee on donation/prasadam orders.
6.	Scalability of the Solution	A modular, microservices-based architecture allows new temples and regions to be onboarded with minimal configuration; cloud infrastructure scales to handle festival-season traffic spikes; APIs can extend to other pilgrimage and travel services in the future.
