Velocity:

For Darshan Ease, the team follows a 6-day sprint duration, and the team's velocity is 20 story points per sprint. Let's calculate the team's average velocity (AV) per iteration unit (story points per day):

Darshan Ease — Sprint Velocity

Sprint Duration = 6 days

Team Velocity = 20 story points / sprint

Average Velocity (AV) = $20 \div 6 \approx 3.33$ story points/day

Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.

Below is the Sprint-1 burndown chart for Darshan Ease, tracking story points remaining over the sprint:
